

ABSTRACT OF THE DISCLOSURE

PRIVATE MEMORY ACCESS IN MULTI-NODE SYSTEM

46 The access of private memory of nodes in a multi-node system is disclosed. A base node of such a coalesced system instructs at least one other node of the system to start a process related to private memory. Each of the other nodes starts the process, where the process access private memory of the node. When the process is finished on a node, the node reports back results of the process to the base node.
